Developing the Nature based Tourism in Minia Governorate: An Analysis of Tourism Potentials and Constraints

Nesreen Khairy Ali  
Lecturer in Tourism Studies Department, Faculty of Tourism and Hotels,  
Minia University

Aya Mohamed Magdy

Abstract

Nature-based tourism is an important component of the tourism industry in the world and its features vary from one destination to another. However, nature-based tourism destinations are not appropriately developed due to structural and operational difficulties related to local planning. In Minia governorate, location, quantity and quality of natural resources and their required infrastructure for tourism development have not been well documented. So that, this paper identified the potentials and problems which face the governmental authorities in developing and promoting nature-based tourism. Moreover, the nature based tourism activities that are most suitable to be developed in Minia governorate have been determined. The collected data depended on in depth interviews depended on questionnaires with governmental authorities related to nature based tourism development in Minia governorate and the main branches of these authorities in Cairo. These interviews were undertaken from February to April 2020. Analysis of these interviews explained that Minia governorate has many natural attractions for developing nature-based tourism activities. On the other hand, it illustrated three main issues constraining the development of nature-based tourism. These obstacles are lacking of adequate financial resources, lacking of coordination and overlapping of competencies between the authorities responsible for the development of nature-based tourism and lacking of tourist awareness of the importance of nature-based tourism development.

1. Introduction

Nature-based tourism is travelling for recreation that depends on the natural resources either as the setting for activities or where the natural resources are the main component of the tourist activity (Zeitlin and Burr, 2011).

According to Hall and Boyd (2005); Zeitlin and Burr (2011); Wolter (2013); Albayrak (2016), there are many nature based forms of tourism such as adventure
tourism, wildlife tourism, safari tourism, agricultural tourism, marine tourism, nature-based tourism, ecotourism and protected areas tourism.

Nature-based tourism has economic importance as it provides the country with foreign currency and jobs. Moreover, it is considered as an economic activity for many developing countries and also for the higher income countries such as Australia. The country can develop a type of tourism which depends on its existing natural, cultural and heritage assets. Furthermore, the existing resources need development of new man-made tourism attractions to support each other (Tisdell, 2013).

The nature-based tourism based on providing more direct income and benefits to local communities while maintaining the natural assets. In other words, the main component of nature-based tourism is to conserve the resources. It cannot continue without preserving the natural resources (Yildirim et al., 2008).

Nature-based tourism includes environmental, social and economic aspects. It applies the sustainable tourism components. Therefore, it achieves a balance between using the natural resources without degrading them and the welfare of local communities (Marzuki et al., 2011).

Minia has many monumental sites as Tal El Amarna, Ashmounin, Touna El Gabal, Melloui Museum, Beni Hassan Region, Bahnasa Region, as well as many mosques, churches and monasteries (Minia governorate, 2019).

Moreover, it has unique natural attractions such as the Nile, areas of agricultural lands and the desert which represent the great part of the Minia's land (Minia Governorate and Ministry of State for Environmental Affairs, 2008). The current research aims at determining the potentials of developing nature-based tourism in Minia governorate and identifying the problems which face this development.

Research Problem
Nature-based tourism supports the sustainable tourism as it can provide environmental, social and economic advantages for tourism destinations. Nature-based tourism has been suggested as a tool to solve the obstacles that developing countries face in protecting their natural heritage and at the same time in improving the economic standard of local people (Savage, 1993; Lee, 2009; Marzuki et al., 2011).

The historical and tourism significance of Minia is illustrated by the completion of the Egyptian-Pharaonic, Greek, Roman, Christian and Islamic eras. Minia has many monumental sites as well as many mosques, churches and monasteries. Moreover, it has several natural attractions (Office of Tourism Management, Minia governorate, 2019). These attractions are considered basic for developing nature-based tourism activities. On the other hand, most of the touristic trips to Minia are cultural trips. Thus, the current research tries to know the potentials of nature-based tourism in Minia governorate and problems which facing developing nature-based tourism activities in this governorate.
Research Objectives
The research objectives are as follows:
1. Determining the potentials of the nature based tourism in Minia governorate.
2. Identifying the most nature based tourism activities that are suitable for Minia governorate.
3. Investigating the obstacles which face the development of nature based tourism in Minia governorate.
4. Putting a plan for developing nature-based tourism in Minia governorate.

Research Questions
There are six questions for the research as follows:
1. What are the nature based tourism potentials in Minia governorate?
2. What are the most nature based tourism activities that are suitable for Minia governorate?
3. What are the advantages of developing nature based tourism in Minia governorate?
4. What are the disadvantages of developing nature based tourism in Minia governorate?
5. What are the constraints which face the development of nature based tourism in Minia governorate?
6. How can the nature based tourism be developed in Minia governorate?

2. Literature Review
2.1 Nature- Based Tourism Definitions
According to Hall and Boyd (2005), nature-based tourism is illustrated as any form of tourism activities that depends on the natural environment. It involves tourism in natural setting such as adventure tourism, tourism that relies on specific natural resource as safari, wildlife tourism, nature-based tourism and marine tourism. Finally, it includes tourism that is developed to conserve natural areas such as ecotourism and protected areas tourism.

Nature-based tourism is defined as tourism which directly relies on the use of natural assets in undisturbed natural areas including scenery, topography, water resources, flora, fauna, wildlife and protected areas (Lee, 2013). Moreover, nature based tourism is defined as outdoor tourism activities in natural areas. The Protected area is a place of unique natural, historical, or geological importance. It has been declared as a protected area to conserve its natural resources and properties (Wolter, 2013).

Albayrak (2016) added that Nature-based tourism is about travelling to destinations that are attractive for tourists in terms of outdoor activities such as bird watching, climbing, stargazing, hiking, camping, fishing, kayaking, and visiting parks. Since destination attributes and attractions in natural areas are often the reasons of visit.
Nature-based tourism is any sustainable tourism activity or experience that are related to the natural environment whether for relaxation, discovery or adventure (Marzuki et al., 2011). Nature-based tourism relies on the natural assets offered by the destination. Conserving these resources is important in the long run, and may be an essential component to develop nature-based tourism (Zeitlin and Burr, 2014). Thus, nature-based tourism includes three elements: education, recreation and adventure.

2.2 The Growth of Nature-Based Tourism

United Nations Environment Programme (UNEP) and Conservation International have explained that most of tourism’s growth is taking place in and around the world’s surviving natural areas (The International Ecotourism Society and TIES, 2005; UNWTO, 2005). According to TIES (2005); UNWTO (2005), nature-based tourism has grown significantly with annual growth rates of 10 to 30%. This percentage is maximizing as nature-based tourism continues to develop fast.

According to Tisdell (2004) and Marzuki et al. (2011), Nature-based tourism and recreation activities have grown recently because incomes have risen globally, and individuals have become better educated. Many studies explain that tourists who have more education and higher incomes are more likely to participate in nature-based tourism than those with less education and lower incomes. Moreover, the diversification of tourism markets as people look for new experiences, adding variety to their experiences help to the growth of nature-based tourism. Furthermore, changing environmental values and ethical attitudes to natural environment.

With regards to the potential economic benefits derived from this high interest in nature-based tourism, the evidence reveals that a great proportion of capital expenditure flows to local people relative to other forms of tourism. The services which are related to nature-based tourism as eco-lodges, local products and the other services depend on local hiring and local products, and sometimes put much money into the local economy (TIES, 2005).

The Eco tourists are more concerned with and aware of environment than other tourists. They have high educational level and income. Experienced nature tourists travel more than others and are willing to pay more than general tourists. They go in a trip on a small number. Therefore, they have relatively little impacts on environment (UNESCO, 2008).

The nature-based tourism destinations and activities will gain more benefits if they implemented the ecotourism. These benefits are promotion and protection of local biodiversity, earning foreign currency, creating direct and indirect jobs, establishing small-scale local businesses, developing local eco-entrepreneurship and creating the possibility of positioning locally produced products within an international marketplace (Marzuki et al., 2011).

2.3 Nature-Based Forms of Tourism

According to Hall and Boyd (2005); Zeitlin and Burr (2011); Wolter (2013); Albayrak (2016), nature forms of tourism are wildlife tourism, adventure tourism, safari tourism, agri-tourism, marine tourism, nature tourism, ecotourism, protected areas, mountaineering, snorkeling, fishing, skiing, hunting, biking, paddling or
rafting, bird watching, climbing, stargazing, hiking, camping, kayaking, and visiting parks.

Adventure tourism is an activity on which tourists travel to a certain destination to practice the adventure activities exist in this destination. There are two types of adventure tourism namely ‘hard’ and ‘soft’ adventures. Hard adventure requires some experience and skills related to certain activity. These activities could be caving, climbing and trekking. Soft adventure is not necessarily requiring previous experience such as bird watching, fishing, hiking, horseback riding, sailing and scuba diving (Swarbrooke, et al, 2012, p. 33).

Agri-tourism can be demonstrated as " The activities that occur when people link travel with the products, services, and experiences of agriculture (Maetzold, 2002, p. 84). Agri-tourism may provide new tools to use farm or agribusiness. Agri-tourism activities are (Blacka et al., 2009):

- Lodging and camping (bed and breakfast, camp sites, farm vacation; farm stays, feeding animals, picking fruit/vegetables, etc.).
- Special events and festivals (music festivals, holiday celebrations, harvest festivals, etc.).
- Recreation activities and events (fee fishing, skeet shooting, canoe livery, biking, horseback riding, fee hunting, bird watching, hiking, rock climbing/rappelling, etc.).

Wildlife tourism is defined as a type of nature based tourism which includes interaction and viewing wildlife (animals and plants) in their natural habitat (Lima and Green, 2017).

Desert tourism involves diversity of products, adventure activities, experiences and environments. Desert tours became a great attraction for tourists. The tourists can enjoy the nature, entertainment activities and meet local people. Therefore, the desert tourism activities as mentioned by Turtureanu (2005); United Nations Environment Programme (2006); Ibrahim (2009); Kenya Association of Tour Operators, KATO (2013) are represented in:

- **Recreational activities**: such as biking, camel riding, or take low-level aeroplane, helicopter or balloon. Safari could be performed through desert jeep or wildlife excursion. There are also trekking, camping and sometimes boat tours on lakes.
- **One-to-three-day tours**: that use local accommodation. They sometimes include bike, horse or camel rides or short hiking. These tours depend on vehicle travel with local guides.
- **individual and motorized tours**: travelers often use their own vehicles or rent a vehicle without a driver. These tourists are independent and are often experienced travelers.
Four days to three weeks tours: are organized by specialist tour operators with local people to discover the desert. Travelers move around on foot, in vehicles or by riding horses or camels.

Marine tourism means traveling away from one's place of residence for recreational activities depend on marine environment such as diving, snorkeling, fishing, yacht cruising, whale watching, water sports and other activities (Orams, 1999). Nature tourism include safe forms of exercise such as hiking, biking, sailing, and camping (Hall and Boyd, 2005).

The Ecotourism was defined as "responsible travel to natural areas that conserves the environment and improves the well-being of local people (Rome, 1999, p.4). There are four criteria for ecotourism (Wood, 2002):

- Travelling to enjoy the natural or cultural aspects of the site.
- Focusing on maintaining resources and taking care of determining the carrying capacity and ability of the natural resource to sustain itself.
- Participation of the local population.
- Education.

According to IUCN (2008), protected area is “A clearly defined geographical space, recognized, dedicated and managed, through legal or other effective means, to achieve the long-term conservation of nature with associated ecosystem services and cultural values”. There are many advantages of tourism in protected areas as follows (Šolar, 2011):

1. Protected areas help to achieve ethical responsibility to respect nature and provide opportunities to learn about the environment.
2. They provide significant economic benefits to the surrounding communities.
3. They offer the world a model of how people can live in harmony with the nature.
4. Staff, visitors and locals gain high awareness of the environment and protected areas.
5. Improving conservation of nature because tourism sector sees the clean and pristine environment as its basic attraction.

**2.4 The Importance of Nature-Based Tourism Development**

Tourism is the largest industry in the world, and nature-based tourism (NBT) is one of the fastest growing segments of the industry. The first objective of developing NBT is to increase understanding of nature through a direct interaction with the natural environment (Line and Costen, 2014). Activities in natural areas have emerged as a reaction against other mass tourism experiences. The development of nature-based tourism achieves economic benefits from the protection of natural assets. Moreover, it directly helping both local communities and governments in achieving sustainable environmental development. Furthermore, it provides revenue to preserve resources. Tourism may indeed contribute to the local economy, generating employment and
income. Nature-based tourists may visit a particular place with preferred natural attractions to achieve their desire in enjoying nature-based recreation experiences (Laarman and Gregersen, 1994; Lee, 2009; Marzuki et al., 2011). Nature-based tourism development can play a relevant role in the environmental education of tourists, providing unique experiences of direct interaction with nature and perceiving in 'first hand' the importance of Nature's sustainable development and management, as a way to protect and conserve the environment (Araujo, 2017).

2.5 General Principles and Requirements of Nature-Based Tourism Development

The Washington Department of Fish and Wildlife developed the five-steps to develop nature based tourism. They illustrated that nature-based tourism development is a process which takes a long time and it may take several years to see results. These steps are (Zeitlin and Burr, 2011):

Step 1: Assess the Raw Material
Nature-based tourism development project requires assessing the existence of the attractions and services necessary for successful development. First, preparation of the natural attractions in the area, the issues of private and public land ownership associated with these attractions, and the aspects of the managing lands on which these occur (e.g., allowable recreational activities, specific management goals). Moreover, the existence of services and infrastructure to facilitate tourism activities should be assessed (e.g., lodging, roads, restaurants). Finally, the benefits of developing nature -based tourism should be evaluated.

Step 2: Imaging the Finished Product
It is important to formulate an image of the desired outcomes and benefits of nature-based tourism development. This assessment should be conduct with the tourism industry stakeholders to determine the benefits and negative effects to each of them.

Step 3: Draft a Plan
In this step, all involved stakeholders should collaborate to write a tourism development plan and determine timetable, budget and funding resources. This should include specific objectives and means of reaching these objectives, and who will be responsible for achieving these goals.

Step 4: Implement – Making it Happen
In this step, regular meetings between those involved are important to quickly address problems that don’t go according to plan. Make a point of facilitating regular communication between all collaborators.

Step 5: Evaluate the Success
This step involves evaluating the degree to which the nature-based tourism development has met the objectives which established earlier. By investigating the reasons for unmet objectives, the collaborators can adjust plans in order to accomplish the goals more effectively in the future. This five step process is best viewed as a continuous cycle, where Step 5 leads back into Step 1 in order to continuously adapt to changes conditions and objectives.
Regional development of nature-based tourism depends not only on the human-made capital (built infrastructure) and natural capital (natural resources and high value species), but also on human resources (professional skills, training and education) and social capital (Sawatsky, 2008). Table 1 shows the requirements for nature-based tourism development.

### 2.6 The Consequences of Nature-Based Tourism

Tourism activities which rely on the natural environment cause pressure on the attraction on which they depend (Cole, 2004 cited of Buckly, 2004). The increasing popularity of nature-based tourism in the marketplace may become a threat to the natural resource upon or around which such tourism is based. In turn, this may threaten the long term viability of the tourism operation itself (Renn and Walker, 2008). According to Powell (2005); Marzuki et al. (2011), nature-based tourism visitation may cause environmental, social and economic impacts. Environmental impacts include increased wildlife mortality; reduced wildlife reproduction; vegetation trampling and destruction; introduction of exotic species; contamination of air, soil, and water; habitat destruction; and alteration of wildlife behavior. Moreover, social impacts represented at degradation of traditional social structures, displacement and poverty. Economically, NBT may provide limited economic impact on local communities and limited economic benefits to local ecological tourism operations. Renn and Walker (2008) suggested that appropriate planning policies, processes and protections are critical to avert this potential disaster. The continuous environmental assessment of the areas being exposed to nature-based activities must be seriously considered.

### 2.7 Previous Studies Related to Developing Nature-Based Tourism

The paper of Marzuki et al., (2011) examined the problems which facing decision makers to develop and promote nature-based tourism in Northern Peninsular Malaysia. A study of nature-based tourism in the State of Perlis was conducted to explore approaches used by government agencies in the development process. They
conducted a series of semi-structured interviews with government officials. Analysis of these interviews demonstrated three main governmental limits hindering the efficient development of nature-based tourism activities within Perlis. These are identified as [1] the weaknesses of government policies and guidelines, [2] disorganized administrative systems and [3] lacking operational financial resources.

Chan (2016) paper discussed the potential of developing sustainable nature-based tourism in Hong Kong from the perspective of local community and tourist. Two demand-side and supply-side models depend on satisfaction with nature-based tourism development in Hong Kong were presented. These two models connect the nature-based tourism attributes, user perceptions of importance and performance levels of the attributes, and the assessment of the nature-based tourism condition. The performance scores are revealing the satisfaction of the locals and the tourists of developing nature-based tourism in Hong Kong. This study found that the institutional issues of policy support, government supervision, and the promotion of a quality tourism service are essential for an all-round sustainability of Hong Kong's nature-based tourism. Moreover, this study explained that Hong Kong has several natural attractions. So, one of the keys to success is to improve the quality of tourism services, the tourism authorities in Hong Kong is to increase the tourist awareness of the readily available nature-based resources. It is of importance to strike a balance between the tourist demand and the local perception in achieving sustainability of nature-based tourism.

2.8 Minia governorate
Minia governorate has the basic attractions that support putting it on the touristic investment map which increases the significance of developing the tourism activities.

2.8.1 The geographic location and population
It is far from Cairo 247km. The borders of Minia are Beni Sweef governorate is from the north, Giza governorate and New Valley governorate from the west, Red Sea governorate from the east and Assuit governorate from the south. The total area of Minia is 32279 km. Agricultural land represents 1840km and the rest part is desert areas. It is obvious that the desert areas represent great part of Minia. Minia's population is the second biggest governorate in Upper Egypt after Giza. Large percentage of its population is 82% from the rural areas and the rest of the governorate is the urban area. Minia has nine centers. They are Edwa, Maghagah, Bani Mazar, Matai, Samalout, Minia, Abu Kourkas, Malawy and Deer Mawas (Minia Governorate and Ministry of State for Environmental Affairs, 2008; The Environmental Management Unit, 2008).

2.8.2 The economic activities
The main economic activity is the agriculture followed by the service sector and the industrial field. There are 103,000 fishermen work in the river Nile while there are 84 fisheries. Minia is famous for the bees' cells as it has about 210 thousand cells. Minia is connected with the other governorates through regional roads and national railway (Minia Governorate and Ministry of State for Environmental Affairs, 2008; The Environmental Management Unit, 2008).
2.8.3 Nature-based tourism attractions and activities

Minia governorate has the beautiful Nile that is surrounded by wonderful green sites along its banks. The governorate enjoys a moderate dry climate most of the year, so the Nile tourism is one of the tourism’s forms in which the tourist can enjoy water, mountains and green areas at the same time. There are 11 Nile islands within the governorate, but they are not yet utilized. Moreover, Minia’s hotels, floats and Nile cruises resting standing along the Nile banks provide an opportunity for tourists to enjoy the sun, the climate and sun baths (The Environmental Management Unit, 2008; Farag and Al-alfy, 2013).

Moreover, the west and the east sides of Minia include a large part of desert areas which have various topographic, geographic and wildlife resources. The desert of Minia has many different natural resources such as the stones, marble, ground water and minerals. Such desert areas support the development of this governorate, especially the valleys with its natural assets of rocks, minerals and ground water (The Environmental Management Unit, 2008).

The governorate is famous with several kinds of wildlife along the Nile, and in the valley. Birds are the biggest animal category in Minia. There are more than 90 kinds of birds whether resident or migrant (The Environmental Management Unit, 2008).

2.8.4 Environmental projects in Minia governorate

There are several environmental projects were established in Minia as some public parks. Moreover, streets were planted with trees. Kornish El-Nile was also developed to be an elegant feature in Minia governorate. Furthermore, several factories were established such as a factory for recycling wastes of agriculture and a factory for recycling garbage (The Environmental Management Unit, 2008). The main priorities of the environmental action plan in Minia governorate are (Minia Governorate and Ministry of State for Environmental Affairs, 2008):

1. Active saving and managing of the environmental issues as solid waste, sanitation, etc.
2. Managing the natural and cultural resources in sustainable manner.
3. Controlling and minimizing the pollution which effects on the natural environment.
4. Improving planning and allocating resources and increasing the participation in planning and executing.
5. Raising the environmental awareness and training.
6. Activating the laws and environmental regulations.
7. Improving poor areas.

3. Methodology

For fulfilling the objectives of the research, both primary and secondary data were used. Primary data depended on qualitative approach which based on in-depth interviews. An interview is a main method of qualitative research in which the
The researcher has data directly from the interviewees. In recent times, several ways are available to conduct an interview not only a meeting. It can be conducted through phone or e-mail or any forms which use the internet and telephone without personal attendance. In-depth interview is a tool of having more detailed information or understanding of a particular topic. In this type of interviews, the participants are encouraged to talk too much about the subject of the study (Srivastava and Thomson, 2009; Alshenqeti, 2014; Showkat and Parveen, 2017). The current study aimed to determine the potentials of nature-based tourism and the most suitable nature-based tourism activities which can be developed in Minia governorate. Moreover, it tried to know the obstacles which facing the development of nature-based tourism in Minia governorate.

3.1 The Sample of the study
The sample of the study was the governmental authorities which related to developing nature-based tourism in Minia governorate. These authorities are Office of Tourism Management, Tourism Promotion Authority and Environmental Affairs Agency in Minia governorate. Moreover, the main branches of Tourism Promotion Authority, Tourism Development Authority and Environmental Affairs Agency in Cairo are an important authority in the research to determine its role in developing nature-based tourism in Minia governorate.

3.2 Designing and Conducting an In-depth Interview
In the current research, In-depth interviews were conducted with staff and managers in governmental authorities which related to developing nature-based tourism in Minia governorate. An In-depth interview include closed and open-ended questions. The purpose is to provide an atmosphere where the interviewer and interviewees can discuss the topic in detail (Srivastava and Thomson, 2009; Alshenqeti, 2014). The interviews aimed at illustrating how the interviewed staff and managers think about the potentials of nature-based tourism in Minia governorate. Furthermore, they were asked to identify, from their point of view, the problems which facing the development of nature-based tourism in Minia governorate. Prior to the interview, it was tested through a pilot study. This pilot study was conducted with five staff in Office of Tourism Management and The Tourism Promotion Authority in Minia governorate. The pilot test showed no problems with wording or understanding.

An In-depth interview in this study includes seven closed questions about the natural attractions and services available to develop nature-based tourism activities in Minia Governorate. Moreover, the questions included advantages, disadvantages of developing nature-based tourism and procedures taken by governmental authorities to develop nature-based tourism. Furthermore, the interviewees were asked about nature-based tourism activities that are most suitable to be developed and the authorities that can participate in the development of nature-based tourism in Minia governorate. Finally, they were asked to identify the difficulties facing the development of nature-based tourism in Minia governorate. Two open-ended questions were asked about existence of developing plan for nature-based tourism in Minia governorate and suggestions to develop this type of tourism. Twenty five interviews were conducted from February to April 2020.
3.3 Analyzing data of Interviews
The closed questions were analyzed by SPSS version 22 and qualitative data from interviews (open ended questions) were analyzed through the qualitative analysis. Qualitative analysis means analysing the questions to identify the main themes that emerge from the answers given by the respondents.

4. Findings and Discussion
After analyzing the interviews, the following results were extracted:

**Table 2**

Table 3 clarifies the attractions and services available to develop nature-based tourism in Minia. The unique geographical site ranked first with a mean score 4.35 followed by The River Nile with a mean score 4.25. Water and sanitation network, Good
network of communications and Different resources of electric power ranked last between the respondents with the same mean score of 3.25.

The interviewees added other attractions and services available to develop nature-based tourism in Minia. These items are such as Villages of a special nature that depend on environmental resources in traditional industries and the sunny weather throughout the year. The first question of the research was answered through table no. 3.

Table 4 shows that increasing the number of tourists visiting the governorate is the first advantages of developing nature-based tourism (mean = 4.30). The respondents agreed that Environmental education through interaction with nature (mean = 3.80), preserving the natural resources for present and future generations (mean = 4.00), creating jobs and improving the standard of living of local people (mean = 4.05) and increasing the national income of Minia Governorate (mean = 4.00) are advantages of developing nature-based tourism in Minia governorate.

The interviewees explained other advantages such as developing attractive environmental industries for tourists, paying attention to the governorate's infrastructure and increasing tourist awareness. Moreover, they added other advantages as putting Minia on the tourist map and benefiting from the existing natural attractions. Through this table, the question no. 3 of the research was answered.

The following table 7 shows that means statistics of the most suitable nature-based tourism activities that can be applied in Minia governorate. The respondents were strongly agree that Safari Tourism (mean =4.40) and Nile tourism (mean =4.25) can be applied in Minia governorate. These activities were followed by camping (mean = 4.00), Rural tourism (mean =3.95), Visiting parks (mean =3.85) and cycling (mean =3.80). On the other hand, the respondents were neutrally in the potential of apply Mountaineering tourism (mean = 3.30), Adventure Tourism (mean =3.10), Fishing (mean =3.05) and Nile sport (mean =3.05) in Minia governorate.

The interviewees added that watching the migratory birds during the season of bird abandonment, especially in the western desert of the governorate can be applied in Minia governorate. The question no. 2 of the research was answered through table 7.

The interviewees added that watching the migratory birds during the season of bird abandonment, especially in the western desert of the governorate can be applied in Minia governorate. The question no. 2 of the research was answered through table 7.
Table 8 clarified that the Lack of adequate financial resources is the first obstacles of developing nature-based tourism in Minia governorate. It is followed by lack of coordination and overlap of competencies between the authorities responsible for the development of nature-based tourism (mean =4.05), lack of tourist awareness of the importance of nature-based tourism (mean =4.00), lack of trained employees (mean =3.95), complexity of the procedures for the development of nature-based tourism (mean =3.80), deficiency of the tourism marketing of Minia governorate specially for natural attractions (mean =3.70), lack of response by the concerned authorities to projects and ideas related to developing of nature-based tourism (mean =3.65) and Lack of adequate tourism services in the current time (mean =3.40). On the other hand, the small number of tourists coming to Minia (mean =3.30) is the last obstacle of developing nature-based tourism. The interviewees showed other obstacle such as the absence of a comprehensive plan for developing infrastructure in the governorate. The question no. 5 of the research was answered through this table.
The table 9 shows the authorities which can contribute to the development of nature-based tourism. It is found that 100% of the respondents agreed that Tourism Administration in Minia Governorate can contribute to the development of nature-based tourism. It is followed by Tourism Promotion Authority in Minia governorate (80%), Environmental Affairs Agency (80%), Tourism companies in Minia (65%) and Local people in Minia governorate (55%).

The interviewees added other authorities which can help in developing nature-based tourism. These authorities are such as Ministry of Investment and International Cooperation; Investors or civil associations that adopt the establishment of environmental hotels and development of handicraft industries from natural environment products.

The interviewees about the possibility of developing nature-based tourism in Minia Governorate

The interviewees in Tourism Administration, Tourism Promotion Authority and in Environmental Affairs Agency in Minia Governorate clarified that environmental profile of Minia governorate includes a complete description of the tourist attractions with a focus on cultural tourism. On the other hand, it doesn’t include nature-based tourism. Nile tourism stopped for several years but returned to work again between Cairo and Aswan passing through Minia. The idea of safari and camping activities in Minia governorate was suggested by officials of Tourism Administration in Minia Governorate to the concerned authorities in Cairo but there is no response. In addition, the officials of Environmental Affairs Agency in Minia Governorate explained that nature-based tourism is represented in the protected areas and Minia has no protected areas.

All interviewees in minia governorate implied that there is no comprehensive tourism development plan of Minia governorate but there is development plan for specific areas as Tona El- Gabal, Bahnasa, etc.

Other interviews were conducted with officials in Tourism Promotion Authority, Environmental Affairs Agency and in Tourism Development Authority in the main branches in Cairo. They showed that the goal of the tourism development strategy is to achieve continuous development that is based on environmental planning, and is directed to preserve the natural resources that make up the capital of tourism.
development. They clarified that nature-based tourism not only the protected areas, but it includes many activities such as safari tourism, camping, Nile tourism, etc that can be developed in Minia. Moreover, they added that there is possibility to establish compound of environmental hotels in Minia governorate. They explained that developing nature-based tourism should be based on analyzing the global tourism market, supply, demand and opportunities of investment. Developing nature-based tourism in Minia required the selection of priority areas and sites of a special nature.

They agreed that traveling in natural areas supports the prosperity of nature-based tourism and leads to setting sustainable standards that enable future generations to enjoy the same wonderful natural attractions. The Nile and the desert in Minia make it a great place to explore nature.

The interviewees' suggestions for the development of nature-based tourism in Minia Governorate

The interviewers suggest some recommendations as:

• Conducting seminars and conferences on nature-based tourism.
• Development of infrastructure in the governorate and providing more tourist services in Minia Governorate.
• Establishment of environmental hotels and organizing exhibitions of products based on nature.
• Developing tourism awareness of nature-based tourism and good marketing of tourism activity in the governorate and especially for nature-based tourism.
• Increasing tourism investments in the governorate, especially within the natural areas.
• Improving the social and economic return of local communities and preserving the customs and traditions that characterize these societies.
• Sustainable use of natural areas and ecosystems according to their carrying capacity.
• Integrating local people and the civil institutions in preparing a plan for developing nature-based tourism in the governorate.
• Benefiting from the experiences of developed countries in this field.
• Taking into consideration the scientific research presented by the concerned authorities for the development of nature-based tourism.
• Providing sufficient financial resources and facilitating the necessary procedures for developing nature-based tourism.
• Establishing environmental hotels depend on local people in everything related to these hotels (building, operation, etc.).

</tr>
</tbody>
</table>
5. Conclusion
The research illustrated that there are many attractions and services available to
develop nature-based tourism in Minia governorate. Moreover, many advantages can
be achieved from developing this type of tourism are such as increasing the number of
tourists and preserving the natural resources. On the other hand, disadvantages can
produce from tourists accumulation in certain areas, which affects their ecosystems
and developing nature-based tourism needs a relatively long time to benefit from its
positive returns. The governmental authorities can take many procedures to develop
nature-based tourism as promoting natural resources available in the governorate,
providing areas for tourism investment and preparing project ideas for developing
nature-based tourism. The most suitable nature-based tourism activities that can be
applied in Minia governorate are safari tourism, Nile tourism, camping, rural tourism,
watching the migratory birds during the season of bird abandonment.

Lacking adequate financial resources, lacking coordination and overlap of
competencies between the authorities responsible for the development of nature-based
tourism, lacking of tourist awareness of the importance of nature-based tourism are
the most obstacles of developing nature-based tourism in Minia governorate. There is
no development plan for nature-based tourism in Minia and the environmental profile
of Minia governorate doesn’t include description of nature-based tourism or natural
attractions. The development of nature-based in Minia should be based on analyzing
the global tourism market, supply, demand and opportunities of investment.
Developing nature-based tourism in Minia required the selection of priority areas and
sites of a special nature. The points of strengths, weaknesses, opportunities and
threats of Minia governorate to develop nature-based tourism were determined.
Finally, a plan for developing nature-based tourism in Minia governorate was
suggested.

6. Recommendations and the future research
The study concluded the most important recommendations that must be followed to
develop nature-based tourism in Minia Governorate as follows:

First: At the level of the governmental sector
1. Working on setting policies related to nature-based tourism, which consist of a set
   of laws and legislations
2. Awareness for all segments of society through all print, audio and visual media.
3. Working to attract and encourage investments in the field of nature-based tourism,
   by providing incentives and facilities to Egyptian and Foreign investors.
4. Attention to the issue of treating and recycling wastes.
5. The necessity of introducing the concept of nature-based tourism within the
   academic subjects in the various academic stages and showing its environmental,
cultural, social and economic impacts.
6. Paying attention to develop and provide the infrastructure, including roads, electricity, water and sanitation on which the tourism activities depended on.

7. Setting a comprehensive plan for tourism development in Minia Governorate. This plan required:
   - A. The participation of the various stakeholders in setting the tourism development plan such as tourism companies, the local community, tourists, governmental authorities related to tourism, etc.
   - B. Setting criteria for assessing the environmental impact of the nature-based tourism activities that are practiced when preparing the plan.
   - C. The necessity of having a trained work team and academics to implement the plan.
   - D. There must be a marketing strategy for nature-based tourism in this plan.

**Second: At the level of the private sector**

1. Extending the establishments that respond to environmental tourism principles such as eco-hotels and environment-friendly resorts.

2. The necessity of diversifying the tourism product and making use of the available natural ingredients such as mountains, Nile River, agricultural areas, and deserts. These attractions can be used to carry out nature-based activities as mountain climbing, water sports, rural tourism, Nile tourism, safaris, etc.

The future researches can investigate the development of nature-based tourism in another governorate in Egypt. On the other hand, the other researches can evaluate the possibility of developing other types of tourism in any governorate which have the ingredients for specific type of tourism.

تنمية السياحة القائمة على الطبيعة في محافظة المنيا: تحليل الإمكانيات ومعوقات السياحة

آية محمد مجدي
قسم الدراسات السياحية، كلية السياحة والفنادق، جامعة المنيا

المракти

تعتبر السياحة القائمة على الطبيعة جزءًا مهمًا من صناعة السياحة العالمية وتختلف مقوماتها من مقصد سياحي لآخر، ومع ذلك لم يتم تطوير السياحة القائمة على الطبيعة في المقاصد السياحية بشكل مناسب بسبب العديد من القيود الإدارية والتشغيلية في عمليات التخطيط المحلية في محافظة المنيا، لم يتم توثيق موقع وكمية وتنوعة الموارد الطبيعية والبنية التحتية اللازمة لتنمية السياحة بشكل جيد. لذلك حدد هذا البحث الإمكانيات والمشكلات التي تواجه الجهات الحكومية المعنية بالسياحة أثناء تطوير وتشييد السياحة القائمة على الطبيعة. علاوة على ذلك تم تحديد الأنشطة السياحية القائمة على الطبيعة والأكثر ملاءمة لتنميتها في محافظة المنيا. اعتمدت البيانات التي تم جمعها على مقابلات شخصية مثيرة معتمدة على الاستبيانات مع الجهات الحكومية ذات الصلة بتطوير السياحة القائمة على الطبيعة في محافظة المنيا والفرع الرئيسي لهذه الجهات الحكومية في القاهرة. أجريت هذه مقابلات في الفترة من فبراير إلى أبريل 2020. وأوضح تحليل هذه المقابلات أن محافظة المنيا بها العديد من عوامل الجذب الطبيعية اللازمة لتنمية أنشطة سياحية قائمة على الطبيعة. من ناحية أخرى أوضح ثلاث قضايا رئيسة تعزى تنمية السياحة القائمة على الطبيعة، وهذه المعوقات هي نقص الموارد المالية الكافية، وعدم التنسيق وتدخل الاختصاصات بين الجهات المسؤولة عن تنمية السياحة القائمة على الطبيعة، ونقص الوعي السياحي بأهمية تنمية السياحة القائمة على الطبيعة.
